1 Data from surveys for the relevant domestic funding sectors. Until 1990, the former Federal Republic of Germany; as of 1995, all of Germany. Discrepancies from the figures in Table 1.1.1 result from use of different surveys (Table 1.1.2: survey of funding sectors; Table 1.1.1: survey of performing sectors).

2 Federal Government and the Länder. Funding for Federal research institutions, as of 1985; funding for Länder research institutions, as of 1985, but only shares for R&D. As of 2016, the increase of the R&D expenditure is due to an increase in the higher education sector of the Länder (partly because of the adjustment of R&D coefficients).

3 Data from surveys of the Stifterverband Wissenschaftsstatistik; in 1985, figures include data for the R&D-staff-cost subsidy programme (German Federation of Industrial Co-operative Research Associations AiF), and adjusted to eliminate double counting. Figures for industry-funded R&D expenditures refer to intramural R&D expenditures and to funds that other sectors (e.g. universities, other countries) have received from business enterprises. Due to revision of the calculation method, as of 1995, figures are not comparable to data from earlier publications.

4 Financed from own funds. Some figures are estimates.

5 Net expenditure without social insurance. As of 2000, excluding hospitals and university clinics with commercial accounting procedures.
